Professional Summary

Lead Full-Stack Engineer with 9+ years of experience building scalable cloud-native platforms, distributed systems, and high-performance web applications across frontend and backend ecosystems. Strong expertise in React.js, Next.js, Node.js, NestJS, TypeScript, GraphQL, microservices, and modern cloud-native architectures.

Experienced in designing scalable UI systems, backend services, APIs, CI/CD pipelines, observability, caching strategies, and real-time systems handling millions of requests and large-scale datasets. Proven ability to lead architecture initiatives, mentor engineers, optimize cloud infrastructure costs, and deliver reliable systems across distributed global teams.

Skills

Languages — TypeScript, JavaScript, Python (working knowledge)

Frontend — React.js, Next.js (SSR, SSG, App Router), React Native, State Management (Redux Toolkit, Redux-Saga, Zustand, React Query), Micro-Frontends (Module Federation), Design Systems (Storybook), Build Tools (Webpack, Vite), Performance Optimization (Code Splitting, Lazy Loading, Memoization, Rendering Optimization), Core Web Vitals, Lighthouse, Accessibility (WCAG 2.1), Responsive & Mobile-First UI

Backend & Architecture — Node.js, NestJS, Express.js, GraphQL, REST APIs, WebSockets, BFF Architecture, Microservices, Distributed Systems, Event-Driven Systems, Pub/Sub, Async Messaging, Streaming & Batch Processing, CQRS, API Gateway, Authentication & Security (JWT, OAuth2, RBAC), Reliability (Rate Limiting, Idempotency, Fault Tolerance)

Databases & Caching — PostgreSQL, MySQL, MongoDB, Redis, Node-Cache, Azure Cosmos DB (Gremlin API), Graph Databases, Blob/Object Storage

Cloud, DevOps & Observability — Azure, AWS, GCP, Docker, Kubernetes, Terraform, CI/CD (GitHub Actions, Jenkins, Helm), Observability (OpenTelemetry, Distributed Tracing, Logging, Metrics)

Testing & Quality — Jest, Cypress, Playwright, WebdriverIO, React Testing Library, ESLint, SonarQube

Professional Experience

Lead Experience Engineer, Publicis Sapient

Nov 2024 – Present | Remote

- Architected and delivered microservices + BFF layers using Node.js/NestJS, GraphQL/REST, and Azure for **high-traffic enterprise systems**.
- Drove **~60% cost reduction** in Azure Cosmos DB by optimizing Gremlin queries, introducing caching, and improving partitioning strategies.
- Reduced API latency through workflow redesign, improved service-to-service communication, and performance tuning.
- Established CI/CD with GitHub Actions (automated tests + quality gates), increasing deployment reliability and delivery speed.
- Implemented observability practices (logs/traces/metrics) using OpenTelemetry and centralized monitoring patterns.
- Mentored **10+ engineers**, led architecture reviews, and supported roadmap planning across distributed teams.

- Contributed to AI initiatives and cloud automation for conversational AI workflows (Amazon Lex + automation pipelines).

Senior Software Engineer, Husys - A People2.0 Company

Sep 2024 – Nov 2024 | Remote

- Delivered real-time full-stack product features using React Native and Node.js with end-to-end ownership
- Built low-latency APIs, secure transactional workflows, and scalable backend services supporting high-concurrency operations
- Improved production reliability through performance tuning, monitoring, error handling, and API optimization
- Collaborated across distributed teams to deliver scalable features while maintaining high engineering standards

Senior Software Engineer, Creospan Private Limited

Feb 2023 – Jul 2024 | Remote

- Modernized legacy applications into scalable React micro-frontends using Module Federation enabling independent deployments and faster release cycles
- Reduced frontend bundle size by 70–80% through advanced profiling, lazy loading, code splitting, rendering optimization, and build performance improvements
- Built internal full-stack productivity platforms using TypeScript and Node.js reducing operational effort by ~70%
- Developed scalable pricing and promotions systems across frontend and backend orchestration layers
- Led frontend architecture decisions, PR reviews, and mentorship initiatives improving maintainability and engineering consistency

Engineer III, Saviynt

Dec 2020 – Feb 2023 | Remote

- Migrated legacy frontend modules to React.js improving developer productivity and accelerating feature delivery
- Improved application performance by 65–70% using reusable component architecture, atomic design systems, Storybook, and frontend governance
- Developed onboarding and configuration tooling reducing manual operational effort and improving workflow efficiency
- Standardized frontend architecture, API integration patterns, and engineering best practices across distributed teams

Engineer, Wipro

Sep 2016 – Dec 2020 | Bengaluru

- Developed scalable full-stack enterprise applications using React.js, React Native, and Node.js from development through production deployment
- Improved transactional and e-commerce platform performance through backend optimization, frontend rendering improvements, and caching strategies
- Built enterprise platforms used across ~2,000 locations digitizing operations at scale
- Developed automation frameworks and performance testing solutions reducing regressions and improving release stability
- Mentored 60+ engineers through onboarding, technical guidance, architecture discussions, and engineering best practices

Education

M.Tech, BITS Pilani

2017 – 2020

BCA, Guru Gobind Singh Indraprastha University

2013 – 2016
